DETAILED ACTION

Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Eric Levinson on 11/29/2004.

The application has been amended as follows:

Claim 1 has been amended in order to avoid a possible statutory double patenting rejection over US Patent 6,611,365.

Claim 4 has been cancelled.

Claim 1 has been amended as follows:

1. (currently amended) A holographic data storage medium comprising:

a first injection molded thermoplastic substrate portion having a thickness less than approximately 2 millimeters and greater than 0.5 millimeters,

a second injection molded thermoplastic substrate portion having a thickness less than approximately 2 millimeters and greater than 0.5 millimeters, and

Art Unit: 2872

a holographic recording material between the first and second injection molded thermoplastic substrate portions, wherein the medium is one of a disk and a card.

Reasons for Allowance

Claims 1-3 and 5-21 are allowable over the prior art for at least the reason that the prior art fails to teach or reasonably suggest the injection molded thermoplastic substrates or substrate portions each having a thickness less than approximately 2 millimeters and greater than 0.5 millimeters as set forth in the claimed combination.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Curtis et al (US 6,348,983 B1): the reference discloses a holographic storage device having a data storage medium comprising, a first polycarbonate substrate (205 of Fig. 2) having a thickness less than approximately 0.6 millimeters, a second polycarbonate substrate portion having a thickness less than approximately 0.6 millimeters, and a photopolymer holographic recording material between the first and second substrate portions, (line 3 to line 7 of Col. 8). The reference does not teach at least the thermoplastic substrates each having a thickness less than approximately 2 millimeters and greater than 0.5 millimeters.
